

We Value Nature
Virtual Office Hour call

*Setting corporate goals
and indicators for
biodiversity*

26 May 2020

We Value Nature Campaign

We Value Nature is a campaign **supporting businesses** and the **natural capital community** to make **valuing nature the new normal** for business across Europe, by:

1. Sharing **research, resources & best practices**;
2. Identifying **barriers & opportunities** for adopting a natural capital approach;
3. **Providing practical support** to help business improve their risk management, communication & stakeholder engagement;
4. Reinforcing & boosting the work of the **Natural Capital Coalition**.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 821303

What is a Virtual Office Hour call & how does it work?

A Virtual Office Hour call offers you a **dedicated time and space to ask questions and have group discussions.**

The aim is to:

- Be a supporting & participatory platform,
- Share your experiences and learn from others,
- Develop an FAQ.

VIRTUAL OFFICE HOUR

A few “house rules”

Put yourself on mute when not taking part in discussions.

But please do feel free to use your camera even when not speaking.

Contribute and share your experiences – we can all learn from one another!

We will be using some polling as well as a live google document.

Are you ready?

We hope you've got some questions and experiences ready to share but just in case, here's a reminder of our topic so you can start thinking about them...

Agenda

Introduction to We Value Nature

- Brief presentation of the We Value Nature Campaign

Setting corporate goals & indicators for biodiversity

- Presentation from Giulia & PJ
- Ask your questions and share your tips & experience with others

Checking-out & engagement opportunities

- Check-out Q.
- Further engagement

Open for group discussion

Who is your support team for today?

Katia Bonga

Nadine McCormick

Giulia Carbone

Dr PJ Stephenson

Check-in question – who are you?

- **Please tell us more about you by sharing your:**
 - Name
 - Role
 - Organization
 - What are you most curious to hear about today

What is the main challenge you face in setting & measuring biodiversity targets?

What support would be most useful to help you set your corporate goals & indicators around biodiversity?

Setting corporate goals and indicators for biodiversity

Specialist Group

The development and use of biodiversity indicators in business

- A variety of business applications have been identified for the use of biodiversity indicators in business <https://portals.iucn.org/library/sites/library/files/documents/2018-049-En.pdf>
- Key learnings:
 - Use biodiversity indicators fit for purpose
 - Define upfront what you are “measuring” (i.e. what are your “questions”?).
- The challenge of measuring the effectiveness of actions at the corporate level:
 - Many companies strive for a unified picture of their biodiversity performance, especially if they are involved in multiple activities, sites, products or brands, with multiple raw materials and supply chains
 - How can data from so many different sites be aggregated into a meaningful measure of biodiversity performance at a corporate level?
- What are the links between reporting indicators and corporate performance indicators?
- How does this process link to Science-based Targets for Biodiversity?

Results-based Management: Key lessons for Business

- We recognize that:
 - Indicators on their own mean nothing – they must be developed against **goals**.
 - People tend to focus on one element in isolation – strategic plans, monitoring and indicators, evaluations – when all elements of **RBM** need to be considered **together**.
- Rather than offering a set of “off-the-shelf” metrics, we focus on guiding the company through a series of **planning** steps to identify the key “biodiversity questions” that need to be answered.

What makes the guidelines unique is that they:

- are based on experiences and practices of the world's conservation organisations and on the lessons learned from applying various conservation project management standards
- build on, complement, cross reference and add value to other relevant business standards, guidelines, and tools (don't reinvent the wheel!)
- allow companies to be more specific and targeted in their choice of species, habitats and ecosystem services to conserve
- advocate an indicator framework that gives a more complete picture of biodiversity than most systems and allows aggregation of data at the corporate level
- have been developed to address identified user needs in the business community.

Key Elements of the IUCN Approach:

1. Plan-Do-Check-Act model

Based around steps of the Conservation Measures Partnership that mirror the Plan-Do-Check-Act model encouraged by, for example, BSI environmental management systems, IFC Performance Standard 1, the Natural Capital Protocol

2. Scalable goals and indicators

The company can use the same type of ambition or measurement at multiple scales (e.g. a goal focused on restoring natural habitat cover, and the related indicator monitoring the change in habitat cover, can be used at a site level as well as being aggregated to the corporate level).

Key Elements of the IUCN Approach:

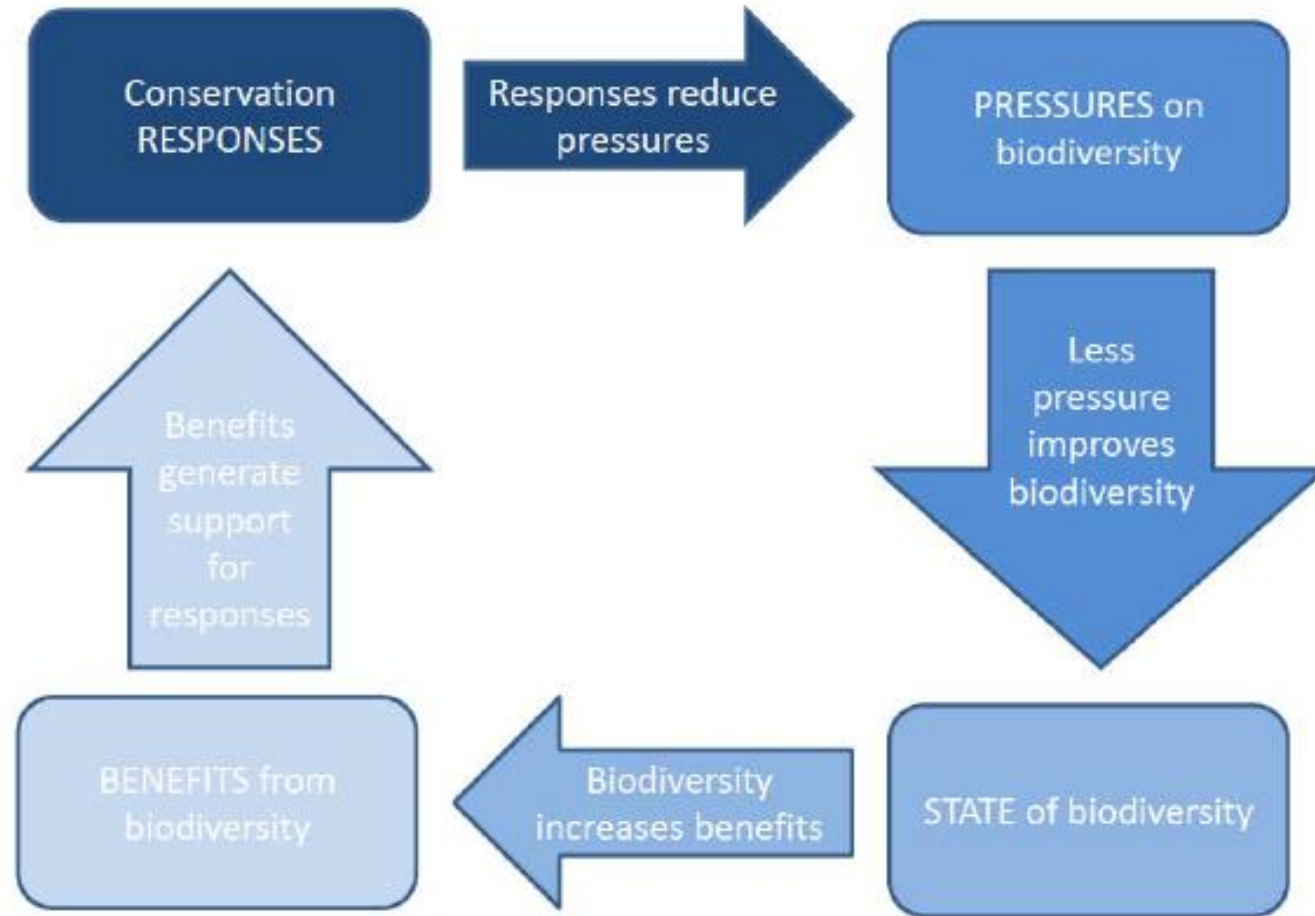

3. Pressure-State-Response-Benefit framework

Commonly used by conservation agencies and governments to monitor biodiversity.

By using this set of interlinked indicators – where a change in one type of indicator is expected to lead to a change in another – companies will be able gain a more holistic picture of their biodiversity performance at multiple levels.

Pressure-state-response-benefit (PSRB) indicator model

Next Steps

Technical and peer review process with partner companies, conservation agencies, etc

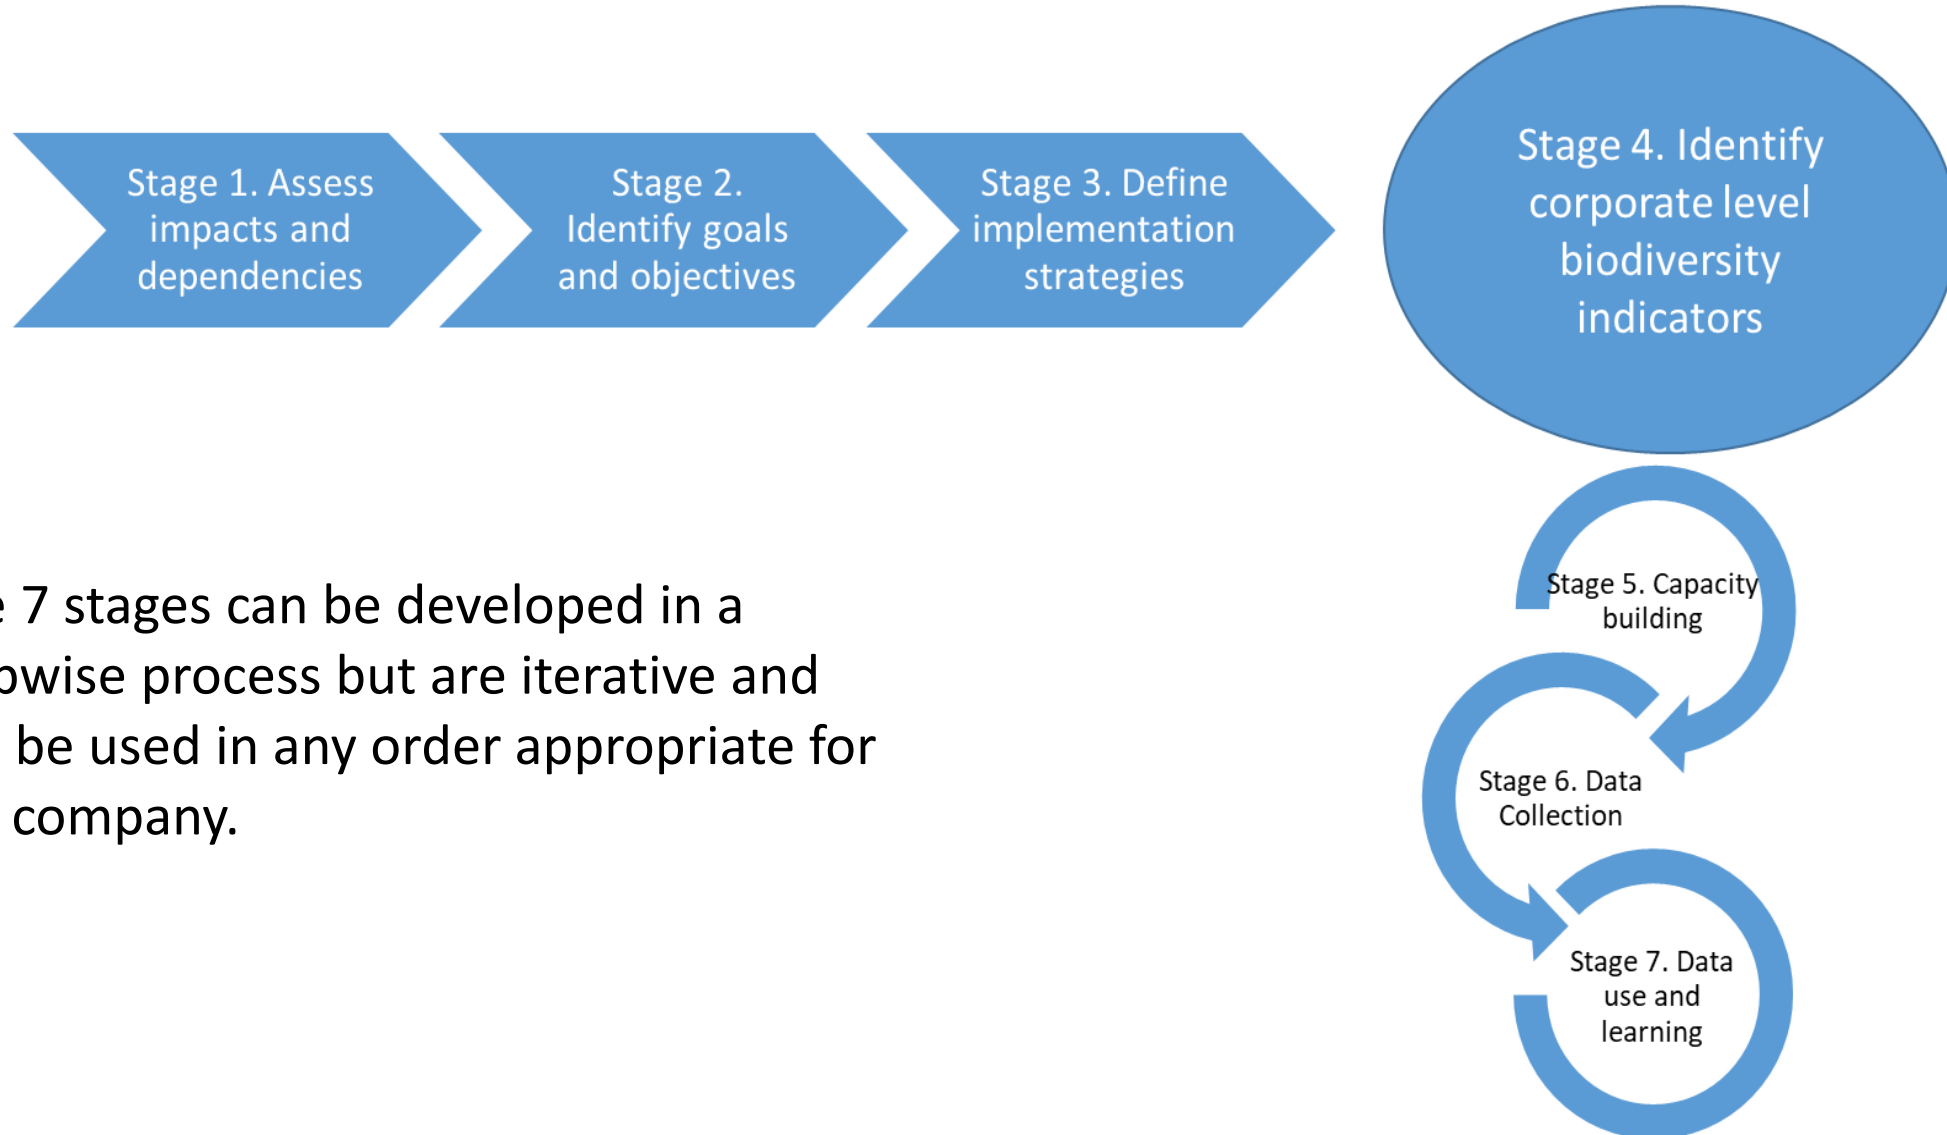

Finalize and publish Version 1.0 of Guidelines in the autumn of 2020

Pilot test and collect good practices and proposed changes in 2021

Develop Version 2.0 in early 2022

IUCN Biodiversity Guidelines for Business

The 7 stages can be developed in a stepwise process but are iterative and can be used in any order appropriate for the company.

IUCN Biodiversity Guidelines for Business: STAGE 1

Stage 1 - Understand the company's biodiversity and ecosystem services impacts, opportunities and benefits

Outcome Stage 1:

The company has an overview of the pressures on biodiversity associated with its operations and a list of species, habitats and ecosystem services it will focus on.

IUCN Biodiversity Guidelines for Business: STAGE 1

A. Define the corporate scope of biodiversity influence (which activities affect or depend on biodiversity)

including all company activities - operations, processes and services managed by the company, and the supply chains and the services feeding and supporting the company's operations (sometimes also downstream)

Note: Many companies will have this information from EIAs, assessments, etc

For a coffee company:

- Coffee farming (e.g. use of land, water, pesticides)
- + coffee processing
- + coffee transport
- + coffee roasting
- + packaging
- + distribution (and maybe some downstream areas around recycling).

IUCN Biodiversity Guidelines for Business: STAGE 1

B. Identify pressures associated to the activities

Company Activities	Biodiversity pressures triggered by the activities	Impacts on biodiversity and ecosystem services
Coffee farming	Habitat (mostly forest) modification, fragmentation, loss	Decrease in habitat cover Decrease in distribution of species dependent on the habitat (e.g. forest-dependent birds) Decrease of population size of species
	Pollution from use of agrochemicals	Decrease in species impacted by chemicals (e.g. soil invertebrates, insects) and the species that feed on them (e.g. birds) Decrease in water quality

IUCN Biodiversity Guidelines for Business: STAGE 1

C. Identify the most important pressures

	Activities associated with coffee production	Biodiversity pressures triggered by the activities	Importance of the pressure caused by the activity (scope + severity)	Impacts on biodiversity and ecosystem services
INFLUENCE	Coffee farming	Habitat (mostly forest) modification, fragmentation, loss	3 + 4 Very high	Decrease in habitat cover Decrease in distribution of species dependent on the habitat (e.g. forest-dependent birds) Decrease of population size of species
		Pollution from use of agrochemicals	3 + 3 High	Decrease in species impacted by chemicals (e.g. soil invertebrates, insects) and the species that feed on them (e.g. birds) Decrease in water quality
		Exploitation of wild plants and animals on or close to the farm	2 + 2 Moderate	Decline in species abundance
	Coffee processing	Pollution (including pulp) from washing and processing beans	3 + 3 High	Decrease in species impacted by chemicals (e.g. soil invertebrates, insects) and the species that feed on them (e.g. birds) Decrease in water quality
Habitat loss from provision of firewood for coffee drying		1 + 2 Moderate	Decrease in habitat cover	

IUCN Biodiversity Guidelines for Business: STAGE 1

D. Identify priority species, habitats and ecosystem services

Operations	Priority taxa	Habitats	Important Sites	Ecosystem services
Coffee production	Forest birds Freshwater fish Butterflies Freshwater insects Soil invertebrates Threatened native trees.	Forests Woodlands Wetlands and river systems	Protected and conserved areas and KBAs within 5 km of the farms	Soil quality and stability Watersheds and water quality Pollination Pest regulation Climate regulation Nutrient and carbon sequestration Timber and non-timber forest products (e.g. fruit, nuts, medicines) Income from sale of harvested agroforestry crops.

IUCN Biodiversity Guidelines for Business: STAGE 1

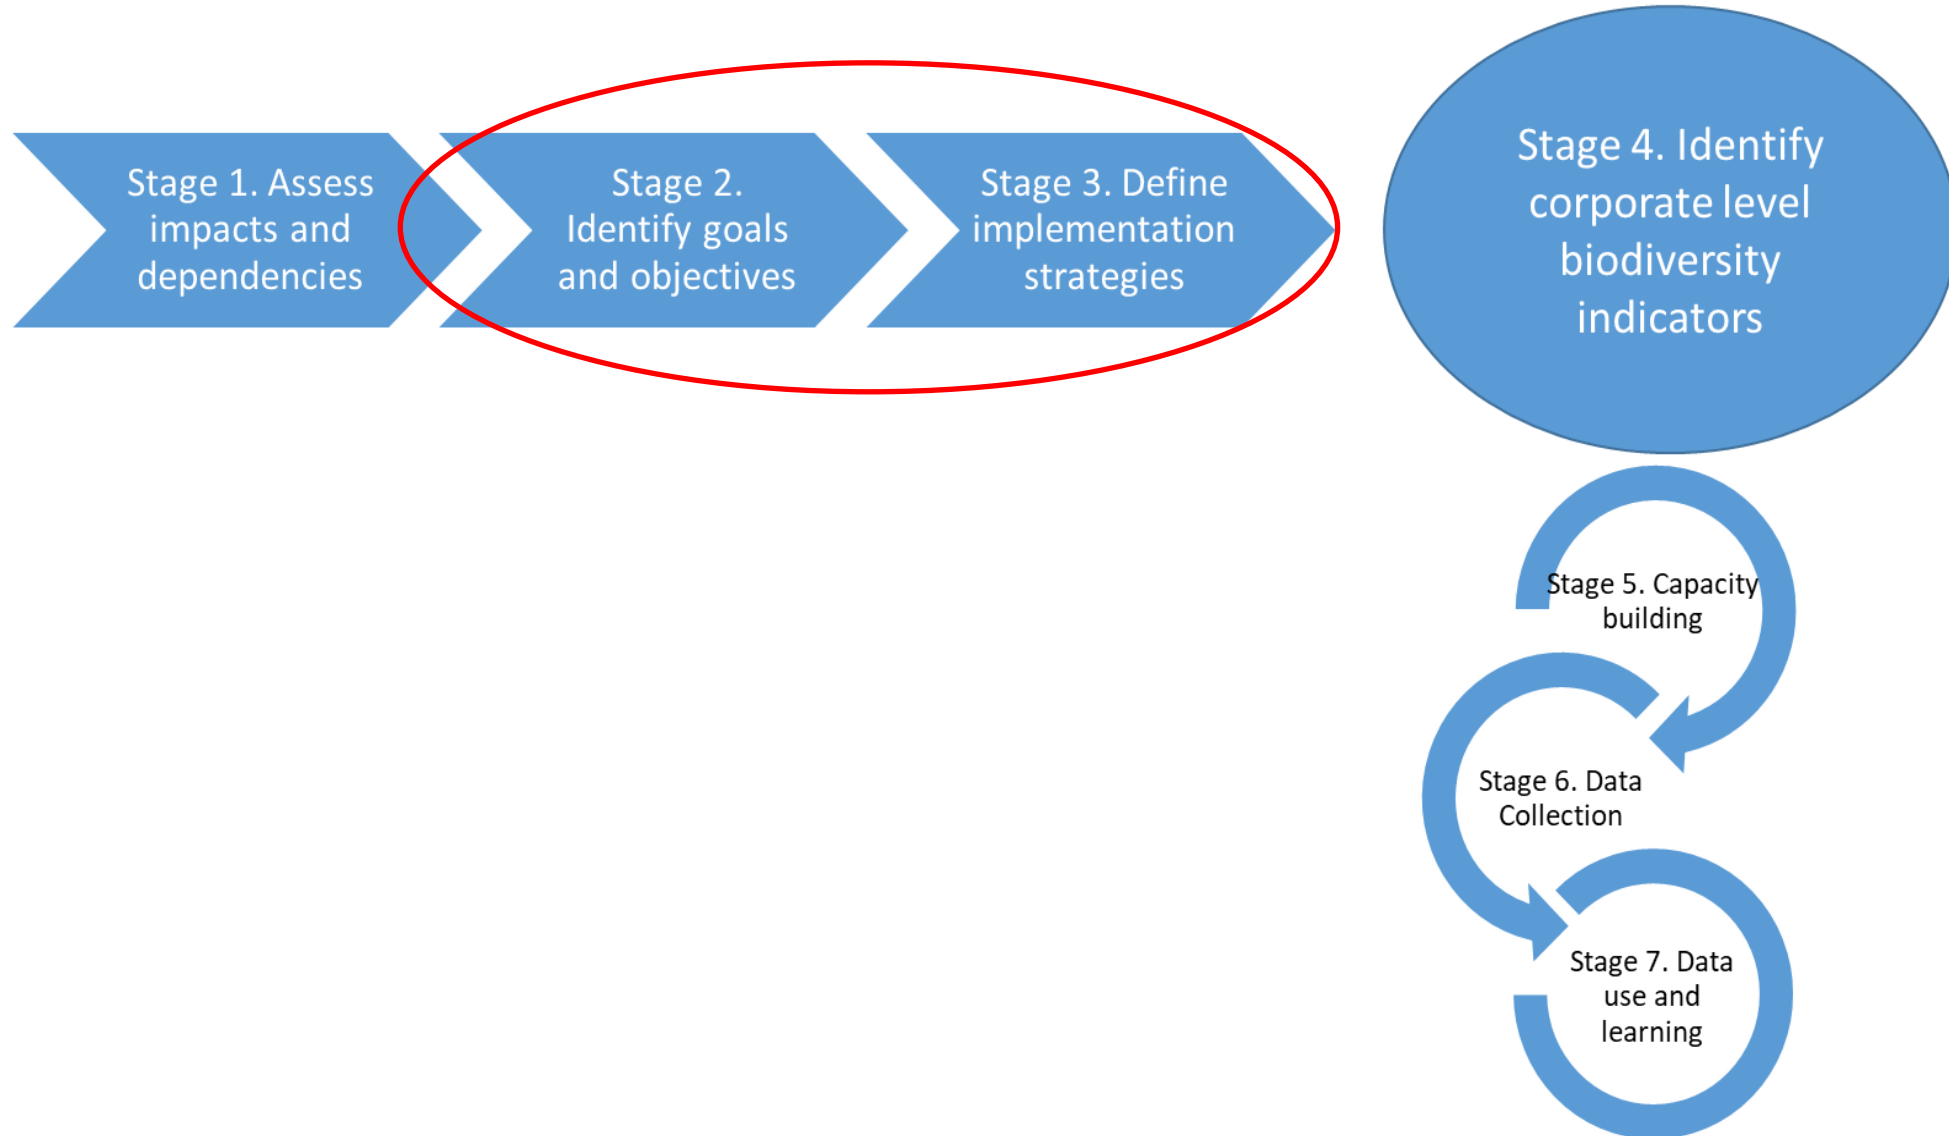

What does this mean at the site level?

Operations	Priority taxa	Habitats	Important Sites	Ecosystem services
Coffee production Costa Rica	Threatened birds in local KBAs: Great Curassow, Keel-billed Motmot, Red-fronted Parrotlet, <u>Great Green Macaw</u> , Bare-necked Umbrellabird, Three-wattled Bellbird, Tawny-chested Flycatcher. Swallowtail butterflies (Genus Battus) Threatened native trees in Class Magnoliopsida.	Forest – <u>Subtropical/tropical moist lowland</u> ; Wetlands and river systems Wetlands (inland) – Permanent rivers/streams/creeks Wetlands (inland) – Freshwater springs	KBAs: Central Volcanic Cordillera; Arenal-Monteverde Protected areas: Rio Grande National Protection Zone; Juan Castro Blanco National Park	Soil quality and stability Watersheds and water quality Pollination Climate regulation Nutrient and carbon sequestration Non-timber forest products (e.g. fruit, nuts) Income from sale of harvested agroforestry crops.

IUCN Biodiversity Guidelines for Business

Stage 2: Develop Goals and Objectives

Biodiversity goals and objectives should

- focus on the priority species, habitats and ecosystem services identified
- build on existing work and sustainability ambitions (don't reinvent the wheel!).

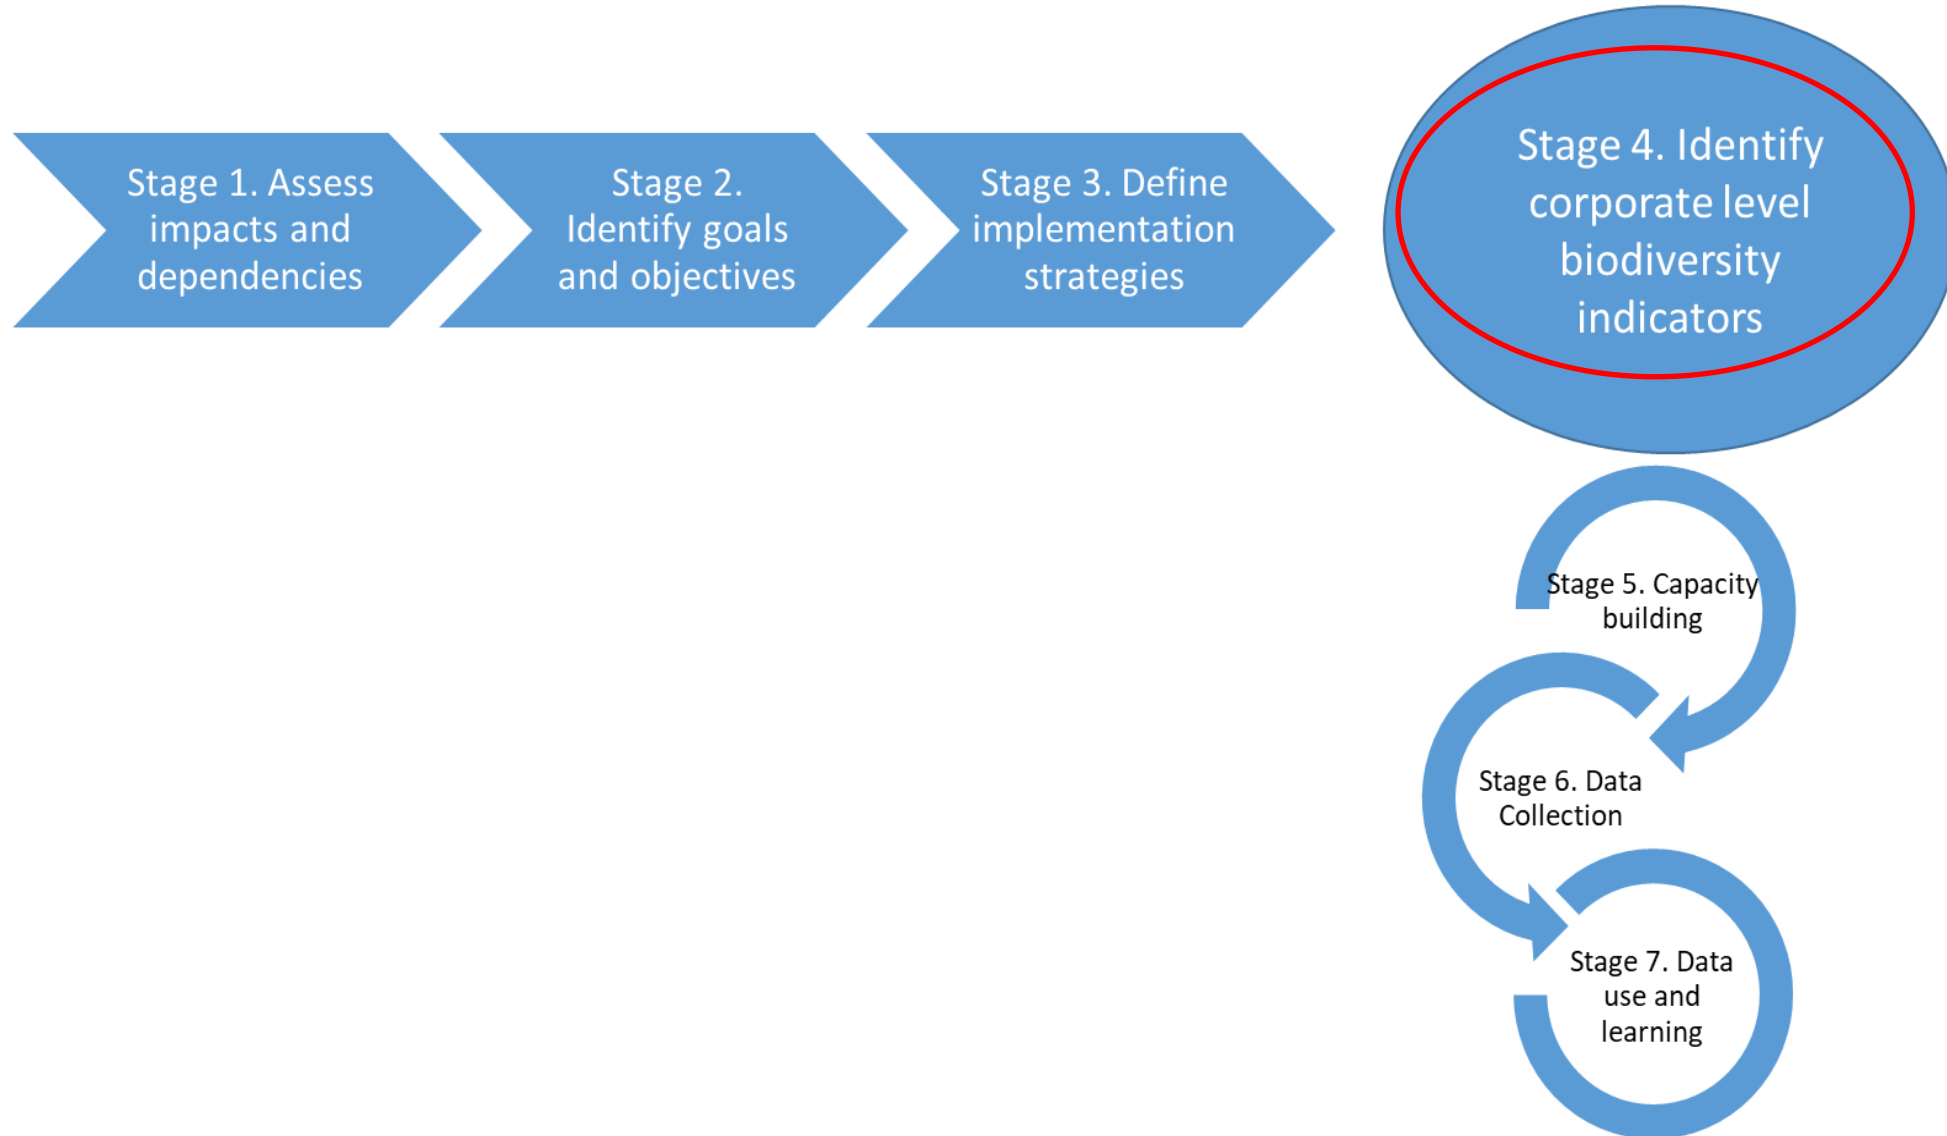

Stage 3: Define actions and strategies and theory of change

Depending on the goals these will include activities relating to, for example,

- Habitat conservation and restoration (establishing protected areas, planting native trees)
- Certification schemes
- Measures to reduce pollution and emissions
- Targeted projects

IUCN Biodiversity Guidelines for Business

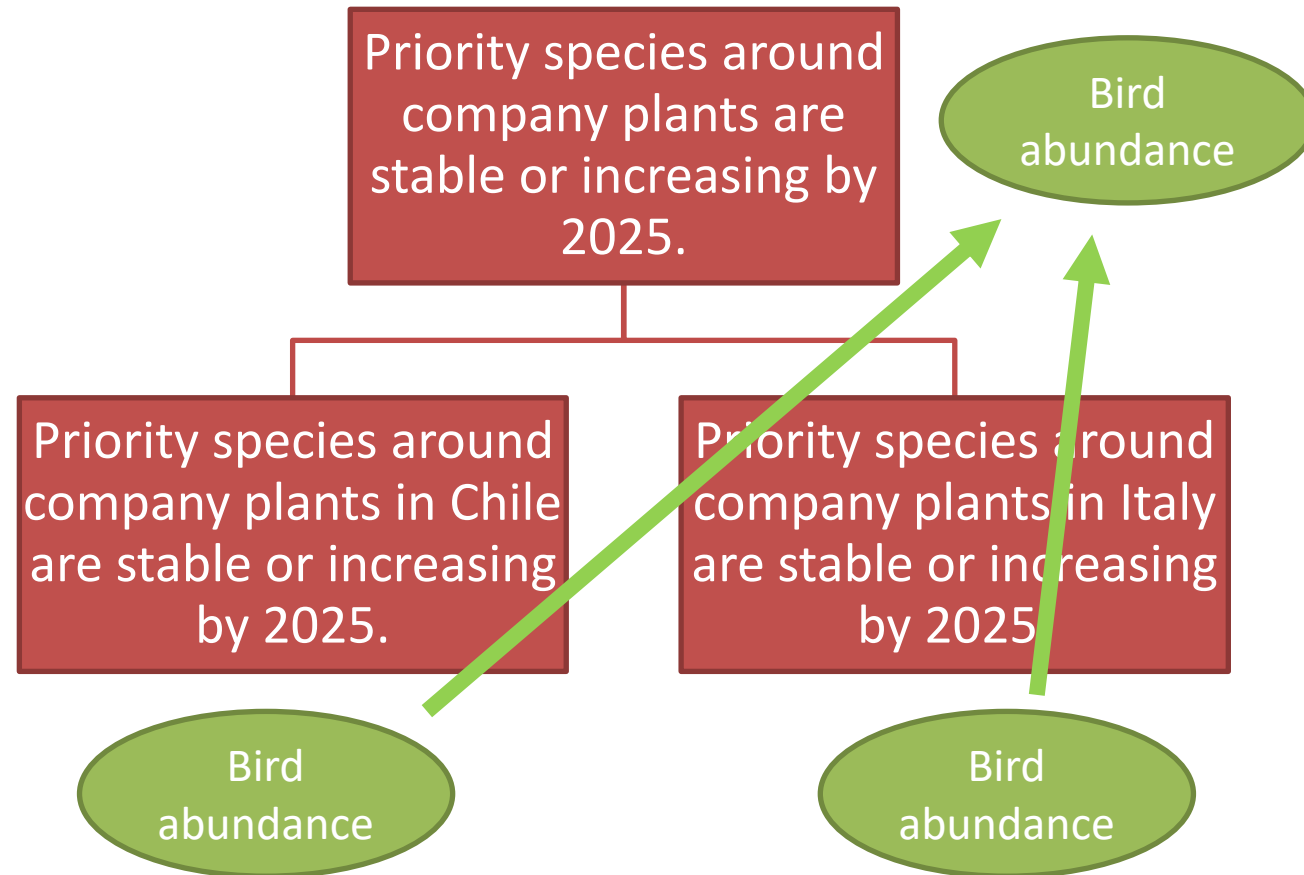

IUCN Biodiversity Guidelines for Business: STAGE 4

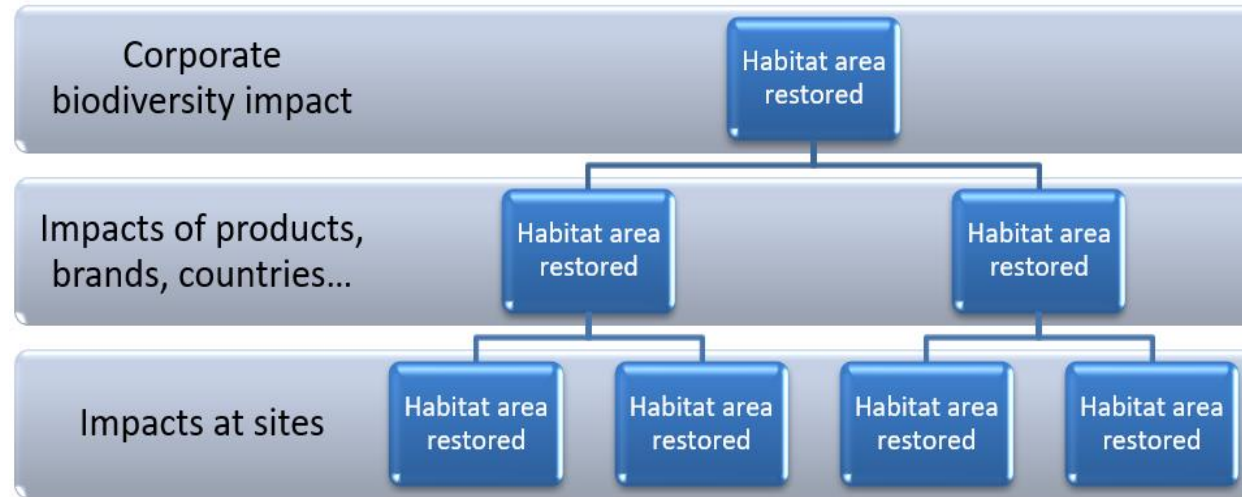

**Example of
scalable
goals and
indicators in
a power
company:
priority
species**

IUCN Biodiversity Guidelines for Business: STAGE 4

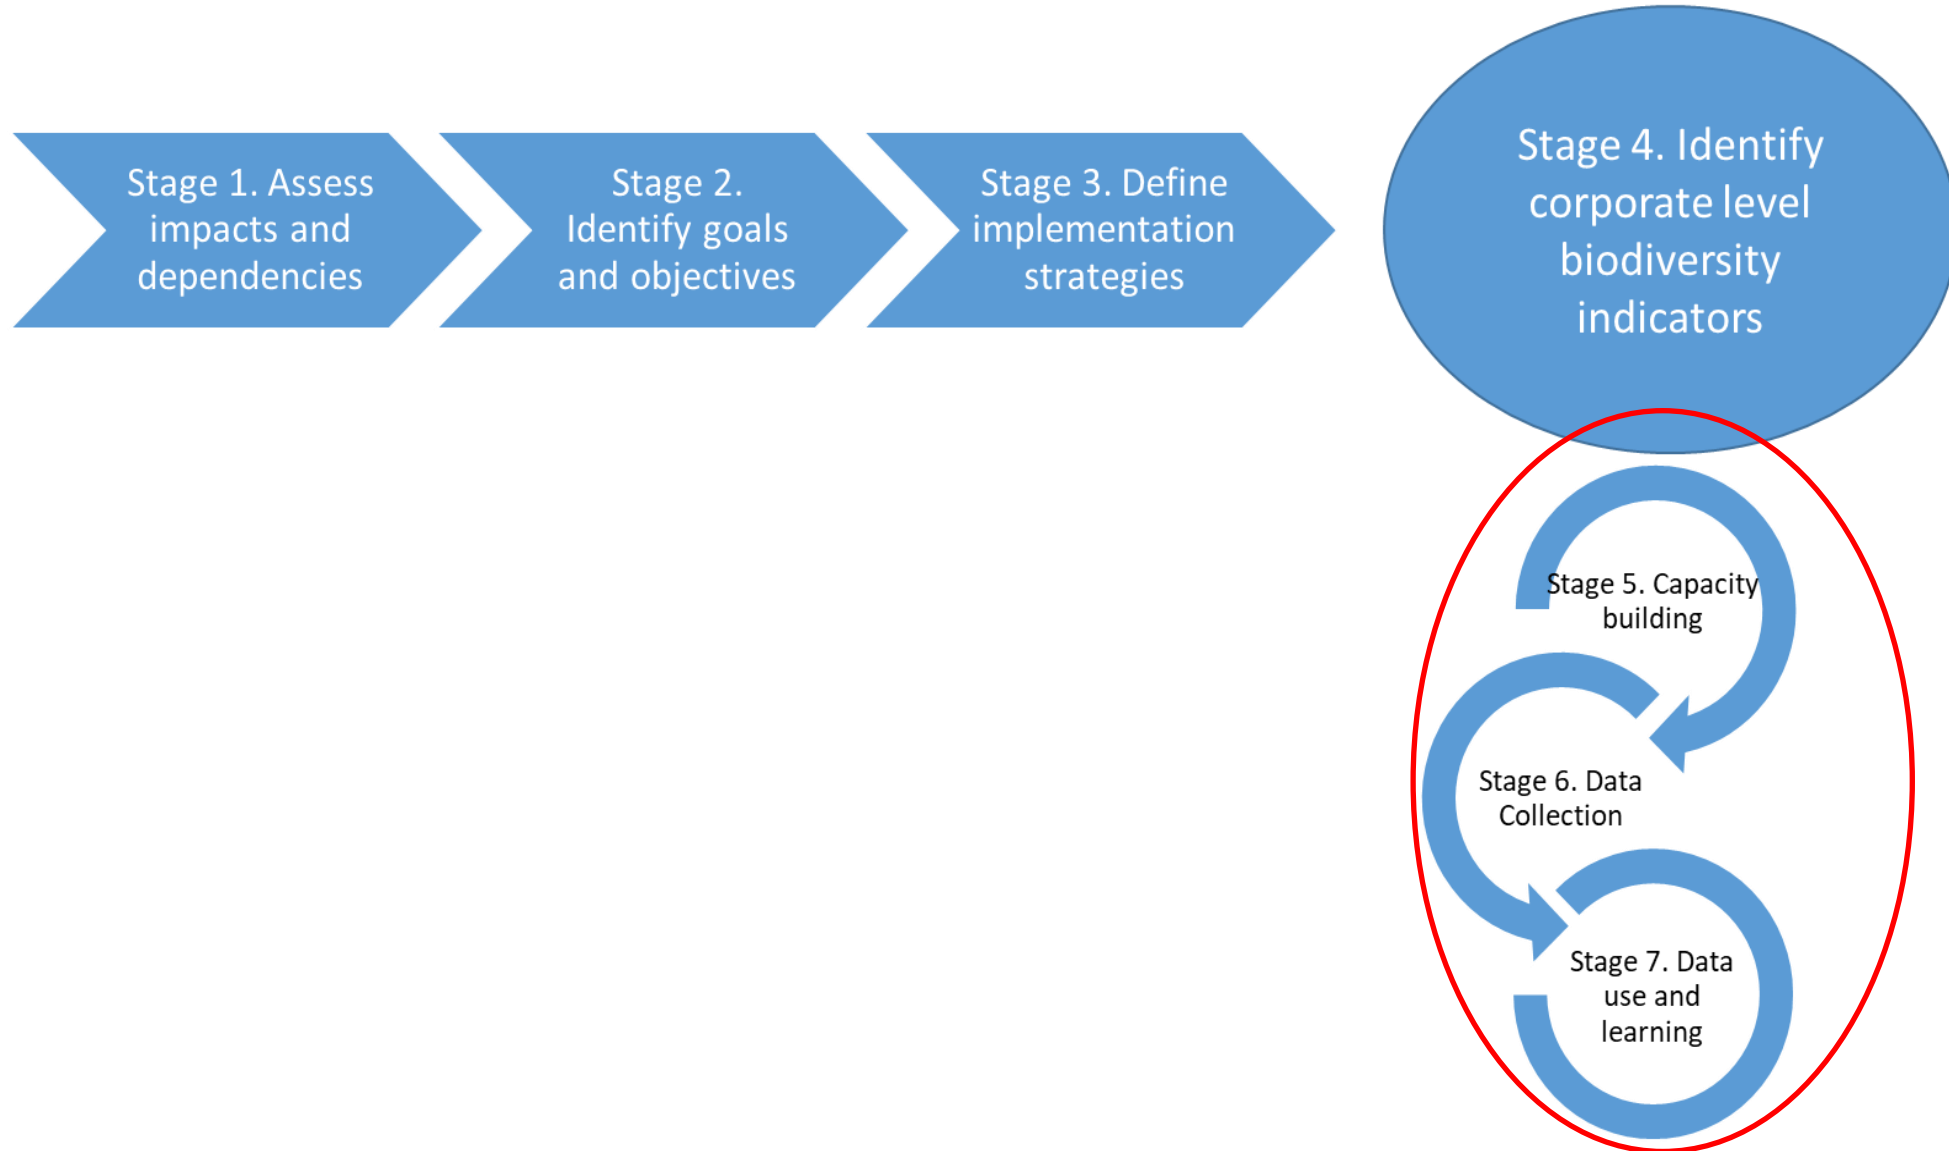

Example of
scalable
goals and
indicators:
area of
natural
habitat
restored

- Corporate Goal: 1 million ha of habitat restored by 2025
- Restoration goals for each management unit
- Restoration goals at site level

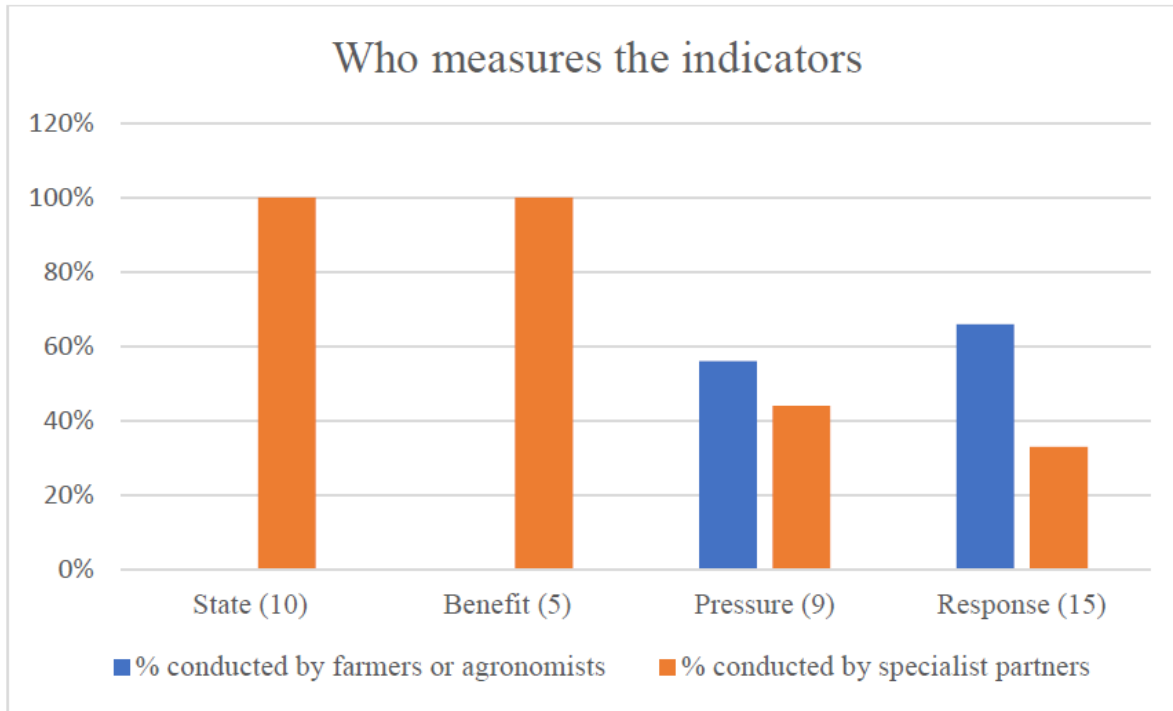

IUCN Biodiversity Guidelines for Business

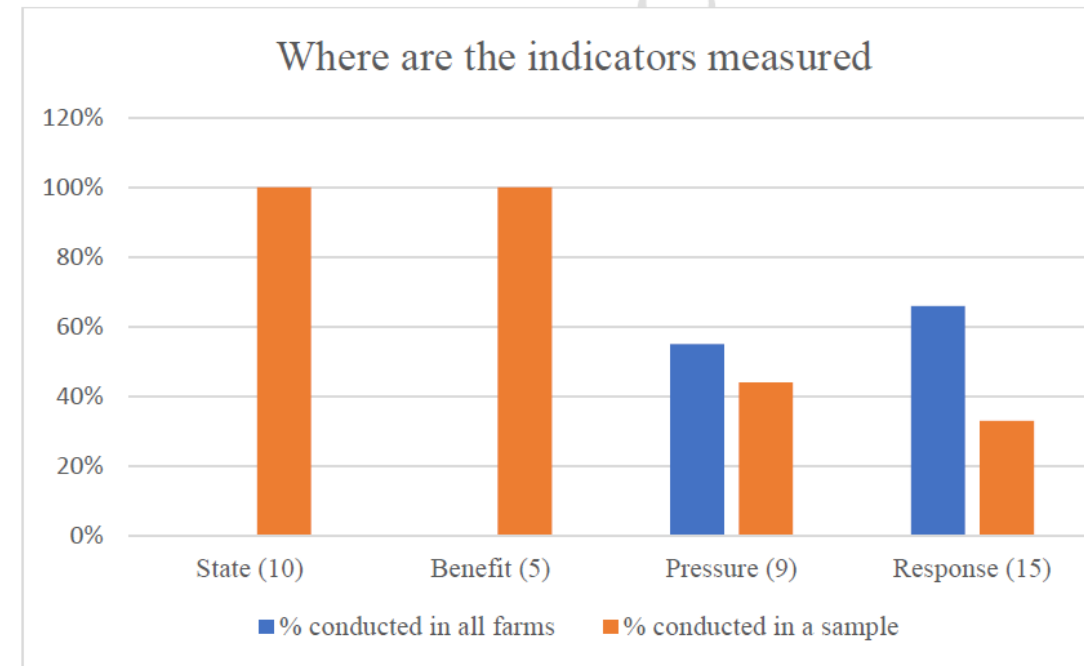

IUCN Biodiversity Guidelines for Business: STAGES 5 & 6

Nespresso case study:

In total, over 60% of indicators can probably be measured by specialist partners in a selected sample of farms

IUCN Biodiversity Guidelines for Business: STAGE 7

For data to be used for **adaptive management**, they have to be aggregated from local to global levels and presented in forms that **facilitate decision-making** (dashboards, maps, graphs).

Place-based Programmes			PRESSURE		STATE		RESPONSE	
PROGRAMME	CONSERVATION ACHIEVEMENT (SP)	KEY ACHIEVEMENTS AND CHALLENGES	P.1 Rate of habitat loss	S.1 Habitat cover	S.2 Habitat fragmentation	S.3 Species population	R.1 PA coverage	R.2 PA management effectiveness
African Rift Lakes	4.8	Elephants in the Mara-Serengeti increased: 2,058 in 1986 to 7,535 in 2014 but 192 carcasses counted. 3,266 ha of degraded land rehabilitated in Kenya, DRC and Uganda + 6,000 ha plantations around Virunga reducing pressure from charcoal. Virunga campaign led to SOCO International abandoning oil exploration in World Heritage sites. New Wildlife Conservation and Management Act gazetted in Kenya supports benefits for communities.	0.6% 0.2%	2.7% 2.4%	7% 1% 6% 1%	mountain gorillas (wildlife)	1.8	
Altai-Sayan	5.6	Snow leopards up 3 to 45 in Russian Altai/Sayan mountains; 37 recorded in Jargalantkhairkhan, Mongolia; snares down 85% since 2008, Argut River. Mongolian PA network increased 572,673 ha since 2012: total PA now 8.3 million ha. Mongolian saiga up from 2,840 to 14,600 since 2007; range up 13% since 1998, 13 pasture reserves (434,380 ha) established in 2013. 256 ha forest restored, 1rd 15 ha with 42,000 Siberian pine trees.	0.2% 0.1%	27.3% 30.1%	30% 12% 32% 14%	Snow leopard, Uvs Province, Mongolia...	1.77	
Amazon (Living Amazon Initiative)		German government approved Euro 2.1 million to build resilience of the Amazon to climate change impacts. MoU signed by the Regional Amazon Indigenous Organization and Living Amazon Initiative to support increased participation of indigenous groups in decision-making and development planning processes.	0.7% 0.3%	56.6% 58.7%	29% 47% 30% 42%	Amazon river dolphin (population density), Incaid and Sublime Stone and Maracá lake systems...	1.38	
Amur-Heilong	6.3	In Khabarovsk province, Shantar Islands NP (515,000 ha) established and 3 corridors connecting tiger habitat (103,300 ha). Terneys company agreed to restrict or ban logging in 669,000 ha of FSC certified forest. Amur tiger occupancy area in NE China expanded 20% compared to 2009. Prey density in key tiger sites doubled since 2010. 70% increase in 1 yr of number of breeding Oriental storks.	0.7% 0.3%	27.1% 26.7%	33% 11% 32% 11%	Amur Tigers	1.77	
Arctic (Global Arctic Programme)	4.8	WWF staff accompanied Norwegian Polar Institute researchers on expedition to Svalbard, Norway to learn more about how polar bears are adapting to their changing habitat. Four protected areas were established in the Murmansk Oblast. Two Russian fishing companies, responsible for 30% of Russian cod and haddock catch in the Barents Sea, were MSC certified. WWF has initiated steps to propose the Last Ice Area as a World Heritage Site.				High Arctic, Low Arctic, Sub-Arctic	1.46	
Atlantic Forests	6	Argentina: Jaguars rose from 33 - 54 to 60 - 100 due to increase in prey, reduced habitat loss, new policies; deforestation rates down from 5,900 ha p.a. (to 2010) to 4,900 ha p.a. (2010-13); sustainable forest management practices in 16 properties, 155,287 ha. Restored: 725 ha, Rucunday (Par); 5 ha Iguazu River (Arg); 68 ha (Bra). Certifications: Soy producer DAP (Par) certified 15,102 ha ITRS; first land owner-producer's group certified by SLIMF (Bra) - 8,017 ha, 58 properties. Zero Deforestation Law (Par) extended to Dec 2018.	0.6% 0.3%	11.4% 12.5%	33% 3% 33% 3%		1.53

What is your
key takeaway
from the call?

Upcoming engagement opportunities

- **Next Virtual Office Hour call:**

11:00-12:00 CEST

- 30 June
- We will soon be communicating next dates for July, August & September – stay up to date here

- **Upcoming (virtual) We Value Nature trainings:**

We are adapting the best we can to the current situation – expect more virtual trainings to come!

We are here to help!

Next call:
30 June
11h-12h
